RE: AQD #17 Emissions Testing

Dear Dan:

Conditions (F9) and (F10) of Permit 30-126 require emissions testing of AQD #17, the common stack of Calciners 1 and 2. Particulate emissions testing is required once per permit term, and NO_x emissions testing is required annually. Enclosed you will find Test Report #1611 conducted by AIRTECH Environmental Services on AQD #17. Results show compliance with the emission limits, and satisfy the stack testing requirements for AQD #17.

Particulate testing was done utilizing EPA Reference Methods 5 and 202 as specified in Condition (F9)(a)(ii), with results of 7.39 pph compared to the limit of 22.3 pph. NO_x testing was done utilizing EPA Reference Method 7 as specified in Condition (F10)(a), with results of 16.5 pph compared to the limit of 30.0 pph.

Also enclosed, per condition (G4), is a certification by Ronald O. Hughes, a responsible official.

If you have any questions concerning the testing, feel free to contact me at (307) 872-6571.

Respectfully submitted,
SOLVAY MINERALS, INC.

Dolly A. Potter
Environmental Services Supervisor
